ABOUT THE 6th ICES

Indiscriminate Anthropogenic Impact: A Trans-disciplinary Approach to Environmental and Social Sustainability

The Anthropocene epoch, defined by the significant and often detrimental influence of human activities on the planet, has led to widespread environmental degradation and social disruption. Anthropogenic activities, ranging from industrialization and urbanization to deforestation and overexploitation of natural resources, have created an unprecedented strain on Earth's ecological balance. Climate change, driven by excessive carbon emissions from fossil fuel combustion, has led to rising global temperatures, extreme weather events, and disruptions to agricultural patterns. Similarly, land-use changes, such as deforestation for agriculture and infrastructure development, have resulted in habitat destruction, biodiversity loss, resource depletion and pollution have profoundly affected both natural ecosystems and human societies. Air and water pollution disproportionately affect impoverished populations, leading to health crises, forced displacement, and loss of livelihoods. The indiscriminate anthropogenic impact is not confined to a single discipline; rather, it is a multifaceted issue requiring a trans-disciplinary approach to sustainability. This essay explores how an integrative framework, encompassing environmental science, social sciences, economics, technology, ethics, and policy-making, can help to mitigate the negative consequences or adverse effects of human actions while fostering or promoting resilience and sustainability. Environmental science and technology play a crucial role in assessing, mitigating, and adapting to anthropogenic impacts. Climate modelling, remote sensing, and big data analytics help scientists predict environmental changes and inform policy decisions. Renewable energy technologies, such as solar, wind, and bioenergy, offer sustainable alternatives to fossil fuels, reducing greenhouse gas emissions and mitigating climate change. The conference on 'Indiscriminate Anthropogenic Impact: A Trans-disciplinary Approach to Environmental and Social Sustainability' endeavours to explore and illuminate the multifaceted landscape of waste management, unveiling innovative strategies, technologies, and policies that promise to shape a more sustainable future. The challenge is immense, but with collective effort, interdisciplinary collaboration, and a commitment to justice and equity, a more resilient and sustainable future is possible. The main aim of the present conference is a step forward in this direction to bridge the gap and provide a platform for interaction and deliberations among scientists, researchers, academicians and policy makers from different parts of the globe as trans-disciplinary approach has a number of advantages for mankind. Sub themes of 6th ICES are as under:

- 1. Impact of Climate Change on Agriculture
- 2. Climate Change and Waste Management
- 3. Biodiversity, Water and Wildlife management
- 4. Climate change scenario and Ozone layer healing
- 5. Waste management and Socio-economic impact
- 6. Bioremediation and Environmental monitoring
- 7. Advances in energy conservation and storage
- 8. Renewable energies
- 9. Innovation in weed control, agricultural intensification and environmental health
- 10. Biodiversity and Ecosystem Services
- 11. Impact of Globalization on Social Sustainability including Economic disparities, Labour exploitation, Cultural erosion and Environmental impact
- 12. Advances in Fishery and Veterinary Sciences
- 13. Sustainable Development of Natural Resources
- 14. Impact of green technology on the economy and ecology
- 15. Biodiversity perspectives of Food, Health and Society
- 16. Role of Women and Tribes in Social and Environmental Sustainability
- 17. Any other relevant topics related with main theme

These subthemes can encourage diverse discussions and provide comprehensive insights into the intersection of agricultural & aquaculture practices, globalization, and social sustainability.
